GIB DISPO-COCKPIT FORECAST

GIB DISPO-COCKPIT FORECAST LETS YOU PLAN FOR YOUR REQUIREMENTS RELIABLY, QUICKLY, AND COMPREHENSIBLY.

OPTIMIZED SUPPLY CHAIN MANAGEMENT BEGINS WITH DEPENDABLE SALES PLANNING

Sales planning and forecasting tool GIB Dispo-Cockpit Forecast is fast and easy to use, and therefore immensely efficient. Reliable prognostic processes facilitate rolling sales planning, giving you the option of refocusing on item and product groups that cannot be forecast. This helps you optimize your planning for the long term. In addition, you have the opportunity to implement your forecasting process in a timely manner, thus increasing your ability to deliver and optimizing inventory.

Forecasting processes with GIB Dispo-Cockpit Forecast facilitate precise forecasting and correspondingly reliable planning precision. Requirements are calculated on the basis of historical sales and consumption data as well as marketing campaigns. These processes are supported, depending on the course of the time period considered, with algorithms by Croston, Winters, Median, and many more. This gives you an overview of the different functions at all times with an easy-to-understand dashboard.

The application controls and manages the transfer to the ERP system or alternative subsystems. Thanks to the integrated upload and download functionality, even small sales companies that are not yet working with a standardized SAP system can include their forecast requirement figures into the consolidation.

With the appropriate download process, the data can be compiled on a cyclical basis using a planning calendar. The planning results are used to optimize inventories, supply readiness, and capacity planning. In addition, there is the opportunity to make the data downloaded from the suppliers available via e-mail, CSV, or in the GIB Dispo Cockpit VMI. As a result, planning is guaranteed throughout all company departments. This increases planning precision and increases your competitive advantage for the long term.
