GIB ACADEMY PROGRAM 2019

PRODUCT-WORKSHOPS
SAP-TRAINING COURSES
PROGRAMMING COURSES

GIB DISPO-COCKPIT CONTROLLING BEGINNERS

Using practical examples, we will show you how to interpret and build key figures, run material classifications based on the ABC and XYZ analyzes, and how to capitalize on the effective use of the range matrix. You will learn how to navigate safely through plant and material numbers and how to use different aggregation levels for your purposes. Learn the supportive, dynamic master data maintenance using formulas and the MRP profile.

Target group

If you are quite familiar with the areas of MRP and/or inventory controlling and would like to learn more about the possibilities of a process-oriented, transparent working method in the Dispo-Cockpit.

Prerequisites

You do not need any specific prior knowledge for this workshop.

Benefit

You will learn the functionality of the modules and be able to create and apply process-related selections and layouts. Logistic performance indicators will assist you in evaluating processes and through classification you will be better able to assess your material spectrum and derive procurement strategies.

Key topics

- Data setup and data pool
- Logistics KPI
- Specify classification parameters and interpret their results
- Show parameter editing options

Events		9:00 a.m. - 5:00 p.m.
		1-day seminar
02/05	DE	
03/13	EN	**EUR 550.00**
06/25	DE	
10/22	DE	

GIB DISPO-COCKPIT CONTROLLING ADVANCED CLASSES

We will show you with practical examples how you can sustainably optimize your inventory while expending a minimum of time. Learn more about the administration of material groupings, the use of rule-based systems, and decision trees. Take advantage of the formulas and the associated option of automated updating of the calculated planning parameters as default values. In addition, we will show you the individual use of segmentation characteristics and the restocking time calculation. Learn about the advantages of specific parameterization and customization options.

Target group

You want to deepen your knowledge and learn adjacent functions. You regard levels of safety stock and re-order point as highly important and are looking for automatic parameter editing options. As product manager, you are curious about the administration of the applications.

Prerequisites

You are already working with this module every day.

Benefit

You are able to adapt the extended range of functions of this module to your operational requirements. You know the technical possibilities and can assess requirements, classify them into the functional scope, and partially implement them. You can define an automatic safety stock and re-order point calculation and synchronize the material master data in SAP.

Key topics

- Administration
- Individual classification, using product lifecycle as an example
- Grouping and classification
- Calculating safety stock and re-order point
- Comparison of data in the SAP material master

Events			9:00 a.m. - 5:00 p.m.
			1-day seminar

GIB DISPO-COCKPIT CONTROLLING SPECIALIZATION / RWB & TWB

We will show you with practical examples how you can sustainably optimize your inventory while expending a minimum of time. Learn more about the administration of material groupings, the use of rule-based systems, and decision trees. Take advantage of the formulas and the associated option of automated updating of the calculated planning parameters as default values.

The use of the Extensions Rule Workbench and Target Workbench to create complex rules and monitor goals will also be shown.
In addition, we will show you the individual use of segmentation characteristics and the replenishment lead time calculation. Learn about the advantages of specific parameterization and individualization options.

Target group

You want to deepen your knowledge and learn adjacent functions. You regard the levels of safety stock and re-order point as highly important and are looking for automatic parameter editing options. As product manager, you are curious about the administration of the applications.

Prerequisites

You are already working with this module every day.

Benefit

You are able to adapt the extended range of functions of this module to your operational requirements. You know the technical possibilities and can assess requirements, classify them into the functional scope, and partially implement them. You can define an automatic backup safety stock and reorder levels calculation and update the material master data in SAP. Easily create complex sets of rules and compare with existing targets.

Key topics

- Advanced GIB Dispo-Cockpit Controlling
- Create and monitor goals (TWB)
- Create sets of rules
- Change MRP parameters

GIB DISPO-COCKPIT CONTROLLING OPERATIONS TECHNOLOGY

In this workshop you will get an overview of the different system settings and the administration of the GIB Dispo-Cockpit Operations and Controlling modules (functions – addressees – purpose). The following questions are the focus of the workshop: What effects do different system settings have on SAP authorization management and the use of the function manager? What options do the dynamic tables and structures offer? What information is required for the transport check? What are the possible uses of the formulas, for example, to determine supporting MRP parameters? In addition, we will show you how to optimally use the online support and download portal for your work.

Target group

All SAP users from the areas of supply chain management, logistics, scheduling, purchasing, and controlling who work with the Operations and/or Controlling modules and want to specify administrative settings and requirements for the modules.

Prerequisites

Knowledge about the handling of the Dispo-Cockpit Controlling and/or Operations modules is required. Programming skills are not mandatory.

Benefit

Make the GIB Dispo-Cockpit users of your company even more successful by designing and implementing efficient and individual authorization concepts, module settings, and layouts.

Key topics

- User settings
- Administration settings
- Function manager
- Class-based formulas
- Dynamic tables and structures

GIB DISPO-COCKPIT OPERATIONS BEGINNERS

In this workshop you will learn how to handle the basic functions of the module, such as selecting and opening planned orders and production orders, processing purchase requisitions and purchase orders, taking into account minimum order values and quantities as well as contracts. You will confidently set up individual user layouts, process exception messages, and will be equipped to deal with missing parts information. Learn the importance of accurate master data maintenance and how to handle external procurement and in-house production smoothly.

Target group

You are quite familiar with areas of MRP or inventory controlling and would like to know more about the possibilities of a process-oriented, transparent working method in GIB Dispo-Cockpit.

Prerequisites

Prior knowledge is not required for this workshop.

Benefit

You will learn the functionality of the module and be able to create and apply process-related selections and layouts. Logistics performance indicators will assist you in evaluating processes and through classification you will be better able to assess your material spectrum and derive procurement strategies.

Key topics

- Data pool and options for data selection
- Display processes via user-specific layouts and variations
- Display options in the main list
- Navigation options

GIB DISPO-COCKPIT OPERATIONS ADVANCED CLASSES

What is meant by cockpit-controlled material requirements planning (MRP)? We will show you goals, measures, and advantages by means of memorable practical examples. You will learn how to implement individual parameters and alerts, as well as tailor selection settings and layouts to your personal needs. With the aid of the GIB Dispo-Cockpit Operations and the Alert Monitor, you will be able to identify critical situations at an early stage and initiate countermeasures in good time (missing parts situation for production orders). Through the targeted use of the offered dashboards, you will be able to gain more transparency and clarity in the future. Depending on your needs, you can selectively display information about storage locations and plants, in single or multiple lines, in quantity or value. A briefing on the use of supporting MRP parameters from the formulas completes this workshop.

Target group

You are familiar with the basic functions in Dispo-Cockpit Controlling and Operations and want to deepen your knowledge and use adjacent functions. You regard safety stock and re-order point levels as highly important and are looking for automatic parameter editing options. As product manager, you are curious about the administration of the applications.

Prerequisites

You already work with the module daily.

Benefit

You will make optimum use of the extended functional scope of the module in the future to meet your operational requirements. You will be able to automatically calculate safety stock and re-order point levels and easily update the material master data in SAP.

Key topics

- Administration
- Expanded overview of functions
- Integration of the DCO and DCC modules
